Time and days you would find most convenient for treatment:  
\_\_\_\_\_

**I, the undersigned pledge to inform of all changes in my physical condition.**

I agree to undergo the treatment, as detailed below in this document.

VoluDerm treatment    TriPollar treatment    VoluDerm+TriPollar treatments

I understand the expected results, the chances of success and the course of the treatment that is required.

I have had the opportunity to consider the following information, ask questions and have had these answered satisfactorily by The MedSpa.

- The VoluDerm (VO) applicator is intended for dermatological procedures requiring resurfacing of the skin for texture improvement.
- It treats the skin in a fractional manner, leaving areas of untreated skin between the affected zones, for improving the healing process.
- The microneedles penetrate the skin using Radio Frequency (RF) energy, inducing controlled tissue heating.
- During the treatment you might feel some pain, vibration, a stinging sensation and heat.
- The TriPollar RF based applicators are indicated for the non-invasive treatment of mild to moderate facial wrinkles.
- The system has a bio feedback control switch which may be held by the patient during treatment. In case of excessive discomfort, the patient may press the button to terminate the treatment automatically.

**I understand that receiving the course of treatment is my choice**

- I was told that post VO treatment, tiny imprint marks in the form of the electrodes or microneedles matrix configuration will usually form within 24 hours to 72 hours post treatment and last for a few days.
- I was instructed to avoid scratching of the imprint marks and to apply sunscreen daily.
- I was told about the possible side effects of those treatments including: local pain, excessive skin redness (erythema), excessive swelling (edema), damage to the natural skin texture (crust, blister, and burn), fragile skin, change of pigmentation (hyper-pigmentation or hypo-pigmentation), bruising, scarring or transient skin breakouts such as acne and pimples. Although these effects are rare and expected to be temporary, any adverse reaction should be reported immediately.
- I was told to avoid heat, exposure to sun and UV and to apply physical SPF sun screen several times a day.
- I was told that in case of excessive swelling, redness or heat, you may apply a cold pack (Not ice) to the area and contact your treating physician

I confirm that I have read and understand the above information and agree to undergo the treatment out of my own free will.
